

FACULTY OF ENGINEERING & TECHNOLOGY

First Year Master of Engineering

Semester II

Course Code: 102340201

Course Title: Data Analytics with Natural Language Processing

Type of Course: Program Elective III/Program Elective IV

Course Objectives: This course provides a unique opportunity for you to learn key components of text mining and analytics aided by the real world datasets. NLP attempts to interact with humans and human texts via language. Problems in the domain include analyzing texts to discover structures and to make decisions. Translating from one language to another. Interacting with humans in dialogue systems or cooperative tasks.

Teaching & Examination Scheme:

Conta	ct hours pe	er week	Course	Examination Marks (Maximum / Passing)				
Locturo	Tutorial	Practical	Credits	Inte	rnal	Exte	rnal	Total
Lecture	Tutorial	Practical		Theory	J/V/P*	Theory	J/V/P*	Total
3	0	2	4	30 / 15	20 / 10	70 / 35	30 / 15	150 / 75

* J: Jury; V: Viva; P: Practical

Detailed Syllabus:

Sr.	Contents	Hours
1	Data Analytics:	4
	Overview, Dealing with different types of Data,	
	Data visualization for Decision making,	
	Text Analytics, Linguistics,	
	Language Syntax and Structure	
2	Fundamentals of Natural Language Processing :	6
	Ambiguity and uncertainty in language,	
	Models and Algorithms,	
	Regular Expressions,	
	Finite State Automata,	
	Morphology, Morphological Parsing,	
	N-grams Models	
3	Text Processing:	6
	Text Tokenization – Sentence, Word	

	Text Normalization - Cleaning, Tokenizing, Removing Special Characters, Expanding	
	Contractions, Case Conversions, Removing Stop words, Correcting Words,	
	Stemming, Lemmatization	
	Understanding Text Structure – Parts of Speech tagging, Shallow Parsing	
4	Classification for Text Analysis :	8
4		0
	Text Classification - Identifying Classification Problems, Classifier Models	
	Feature Extraction – Bag of words Model, TF-IDF Model, Advanced word	
	Vectorization Models	
	Classification Algorithms,	
	Evaluating Classification Models,	
	Applications	
5		8
5	Clustering for Text Similarity:	ð
	Unsupervised Learning on Text	
	Clustering by Document Similarity – Distance Metrics, Partitive Clustering,	
	Hierarchical Clustering	
	Analyzing Document Similarity,	
	Document Clustering	
6	Semantic and Sentiment Analysis:	8
U	Semantic Analytics,	U
	Word Sense Disambiguation,	
	Named Entity Recognition,	
	Analyzing Semantic Representation,	
	Sentiment Analysis	

Suggested Specification table with Marks (Theory) (Revised Bloom's Taxonomy):

Distribution of Theory Marks						R : Remembering; U : Understanding; A : Application,
R	U	Α	Ν	Ε	С	N: Analyze; E: Evaluate; C: Create
20%	30%	20%	10%	10%	10%	

Note: This specification table shall be treated as a general guideline for students and teachers. The actual distribution of marks in the question paper may vary slightly from above table.

Reference Books:

1	Speech and Language Processing - An Introduction to Natural Language Processing,
	Computational Linguistics, and Speech Recognition Second Edition by Daniel Jurafsky and
	James H. Martin, Pearson Education India
2	Foundations of Statistical Natural Language Processing, Chris Manning and Hinrich Schütze,
	MIT Press
3	Text analytics with python, Dipanjan Sarkar, Apress
4	Computational Nonlinear Morphology: With Emphasis on Semitic Languages, Kiraz, George
	Anton; Cambridge University Press
5	Oxford Handbook of Computational Linguistics.

Course Outcomes (CO):

Sr.	Course Outcome Statements	%weightage
CO-1	Understand approaches to syntax and semantics in NLP.	20%

CO-2	Understand approaches to discourse, generation, dialogue and summarization within NLP.	30%
	summarization within NLP.	
CO-3	Understand current methods for statistical approaches to machine	30%
	translation.	
СО-4	To introduce basic mathematical models and methods used in NLP	20%
	applications to formulate computational solutions.	

List of Practicals / Tutorials:

1	Introduction to python libraries for feature extraction and NLP.	
2	Split the text sentence/paragraph into a list of words.	
3	Tokenize words, sentence wise.	
4	Remove a regex pattern from the input text.	
5	Perform lemmatization and stemming.	
6	Perform POS tagging annotation on input text.	
7	Generate N grams of the text.	
8	Convert text into TF IDF vectors.	
9	Perform text classification.	
10	Implement text similarity technique.	
11	Case Study - Identify the sentiment of tweets
